## Information letter on the *Fit4Future* sustainability strategy in the supply chain

Dear supplier,

dealing with climate change is one of the greatest tasks of our time. It is good that when it comes to sustainability, we no longer discuss whether a transformation of the economy must take place, but rather how this will happen in concrete terms.

With our *Fit4Future* sustainability strategy, we combine economic, ecological, and social responsibility - along the entire value chain. For us, sustainability means generating sustainable, environmentally, and socially compatible economic added value for ourselves and our partners. Climate neutrality is an essential part of this strategy: by 2040, we have set ourselves the goal of operating our production completely CO<sub>2</sub>-neutral. As early as 2030, we aim to reduce CO<sub>2</sub> emissions by 20%. Important milestones are CO<sub>2</sub>-neutral production in all the ACPS Automotive Group's own plants, the agreement of concrete CO<sub>2</sub> measures with you as our supplier, and the increase in the proportion of recycled materials for the material groups steel, aluminum, and plastics.

With the *Fit4Future* project, we stand behind the agreements of the Paris Climate Agreement. It is important to us to approach the implementation of our climate goals holistically and to drive them forward together with you. For this reason, we aim to purchase exclusively CO<sub>2</sub>-neutral products from you by 2040 at the latest.

It is important to us to drive forward the implementation of the goal of CO<sub>2</sub> neutrality together with you, the partners of ACPS Automotive.

# ACPS AUTOMOTIVE

To be able to tackle this common goal, we need extensive information from you on the subject of CO<sub>2</sub> emissions and recycled materials. Therefore, we are sending you two self-disclosure questionnaires that deal with this topic. In this way, we would like to find out where our partners stand and plan our next steps on this basis.

The first document is the *SAQ 4.0*, a standard in the automotive industry that covers topics such as compliance, occupational health and safety, environment, CO<sub>2</sub> emissions and others. We also fill out this questionnaire for our customers, the OEMs. Standardization creates good comparability and helps to identify potential for improvement. If you have already filled out this questionnaire on the NQC platform, please let us know - then you do not need to fill out the document again here.

The second document, *Decarbonization Roadmap Supplier Questionnaire*, deals with the topic of CO<sub>2</sub> emissions and reduction in more detail, and focuses on recycled materials.

To be able to tackle the Fit4Future sustainability strategy, please complete and return the attached documents to us by 04<sup>th</sup> of July 2022.

If you have any questions, please feel free to contact our sustainability department at [csr@acps-automotive.com](mailto:csr@acps-automotive.com)

Yours sincerely
